## **DETAILED ACTION**

1. In view of the Amendments filed on 3/4/09, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

/Robert A. Siconolfi/

Supervisory Patent Examiner, Art Unit 3657.

## Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3657

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Keijzer et al. (USP 3,954,257) in view of Funkhouser (USP 2,458,157) and further in view of Oishi (USP 6,332,602).

Keijzer shows a piston-cylinder unit, as in the present invention, comprising a cylinder 12, a piston rod 56 having section projecting out of said cylinder as shown, said section having an end arranged distal from said cylinder, said end being threadably received in a mounting bearing 124 forming a threaded joint connecting the pistoncylinder unit to a support 110, and a bellows 78 covering said section of said piston rod for protecting said section of said piston rod against at least one of dirt and damage, wherein an unimpeded flow connection 112, 114 is provided in the end of said piston rod, said flow connection comprising a transverse bore 114 leading to the interior space of said bellows and a longitudinal bore 112 proceeding from said transverse bore and opening outside of said bearing on said distal side of said bearing as shown in figure 4, said flow connection being permanently open and communicating freely only with an interior space defined in said bellows. Keijzer shows the flow passage 112, 114 is for flow between the interior space of the bellows and a pressurized air source while the claim requires a flow communication between the bellows chamber and the atmosphere. Funkhouser teaches that for type of shock absorbers that does not employ pressurized air, the flow passage 36, 42 simply communicates the bellows chamber to the atmosphere. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified Keijzer's unit to comprise the

flow passage to communicate the bellows chamber to the atmosphere instead of a pressurized air source as taught by Funkhouser to accommodate vibration absorption applications wherein the shock absorbers employ only atmospheric air as taught by Funkhouser. Keijzer's unit, as modified, lacks the bead and groove as claimed. Oishi teaches the concept of a groove 28 and a bead 30 to engage the groove in figure 1. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have further modified Keijzer's unit to employ the bead and groove attachment arrangement to provide a more secure connection as taught by Oishi. Furthermore, it is well settled that making one piece of the upper attachment part and the bearing to be old and well known knowledge.

## Allowable Subject Matter

4. Claim 12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lan Nguyen whose telephone number is (571) 272-7121. The examiner can normally be reached on Monday through Friday, 7:30am to 4:00pm.

Application/Control Number: 10/779,290 Page 5

Art Unit: 3657

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Siconolfi can be reached on (571) 272-7124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
